Personal Projects

Cal Poly College of Engineering
Undergraduate Research Intern

San Luis Obispo, CA
Sep 2024 - Present

- Undertook research project to apply Human Activity Recognition to CGM trackers to predict glucose levels.
- Working with Dr. Ria Kanjilal to analyze published datasets on Activity vs BGL level for predictive modeling.
- Began preliminary testing using Predicted Random Forest and LSTM models to accurately predict glucose levels.

WeClass

Co-Founder/CEO

San Jose, CA
Feb 2023 - Nov 2024

- Established an Edtech platform for struggling students operating in 6 Bay Area Schools.
- Ideated product and assembled student led team of 3 full-stack developers.
- Worked minimally with integrating a scalable Node.js backend platform hosted on Amazon Lightsail, using MySQL for database management.
- Advertised through cold-email/TeachersPayTeachers, and pitched MVP to 15+ teachers.
- Organized development for new features based on teacher feedback.

Verge Financial Services
Co-Founder

Palo Alto, CA
May 2023 - Aug 2023

- Co-founded financial consolidation service for underprivileged families through personal budgeting, accounting, and investment management.
- Collaboratively built interface using React.js for basic front-end development.
- Qualitatively scored and emailed 250 leads, receiving 8 interests in beta product, and pitched to 3 investors.
- Personally began the usage of cold-email surveying to inform product development based on data insights.

Leadership & Activities

Kappitx - B2B Payment Automation
Software Intern

San Jose, CA
June 2022 - Aug 2022

- Used SaaS to help struggling contractors save \$5000 in lost revenue from missing payments.
- Cold called 23 leads and successfully worked with 6 local San Jose contractors.
- Set up websites for each contractor connecting Kapittx's payment service to their preexisting business.
- Used Squarespace for websites and added custom HTML/CSS to further customize interface.
